

CORKSCREW SWAMP SANCTUARY

FREQUENCY OF BOARDWALK OBSERVATIONS

Figures in the charts are the average percentage of days each month that a species was observed by one or more Corkscrew Swamp Sanctuary boardwalk volunteers from October, 1998, through January, 2014. The percentages do not take into account the number of individuals, so 1 individual of a species counts the same as 40 individuals.

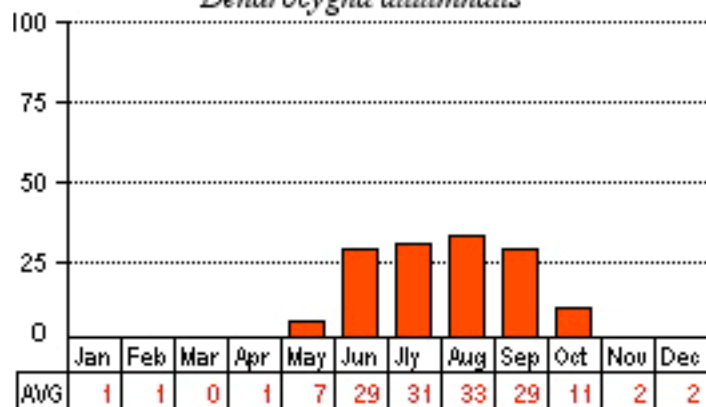

Use the charts as a guide to what might possibly be seen during any particular month of the year.
The charts are not, however, a guarantee that a species will or will not be observed.
